## 7.1

First we plot the P chart without excluding any data.

Number of groups = 20

Center = 0.0585

StdDev = 0.2346865

LCL = 0

UCL = 0.1289059

Number beyond limits = 1

Number violating runs = 0

Now we plot the control chart excluding any outlier.

Number of groups = 19

Center = 0.05368421

StdDev = 0.2253935

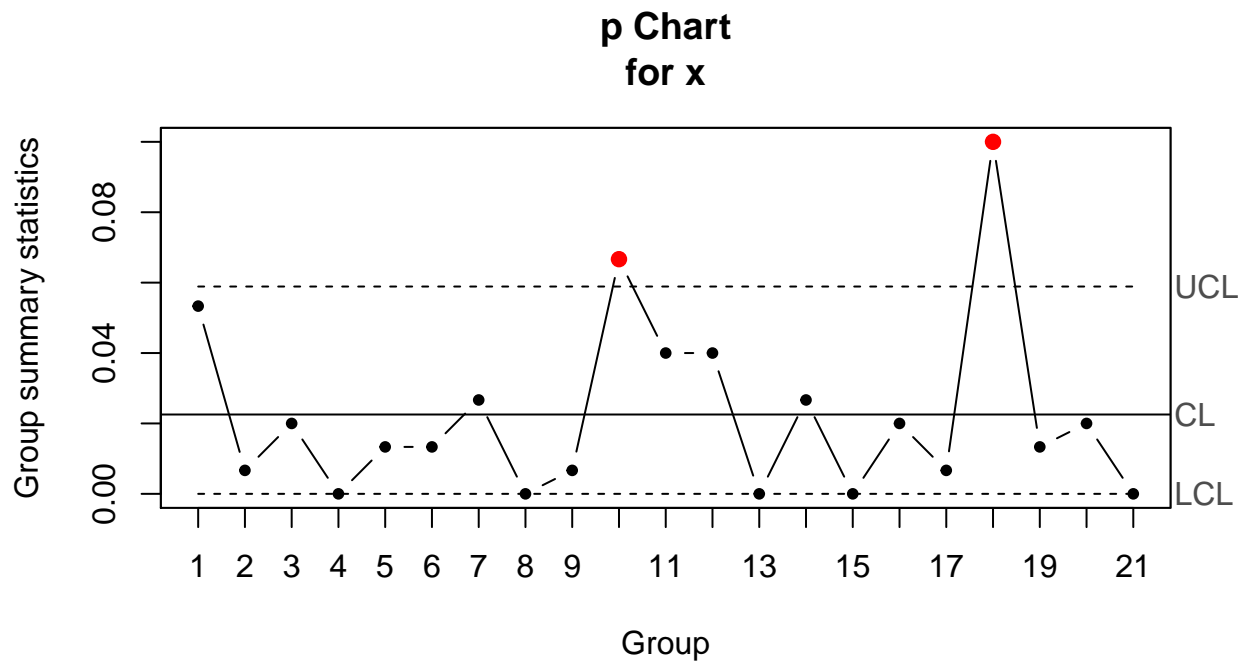

LCL = 0

UCL = 0.1213023

Number beyond limits = 0

Number violating runs = 0

## 7.2

Number of groups = 21

Center = 0.02253968

StdDev = 0.1484306

LCL = 0

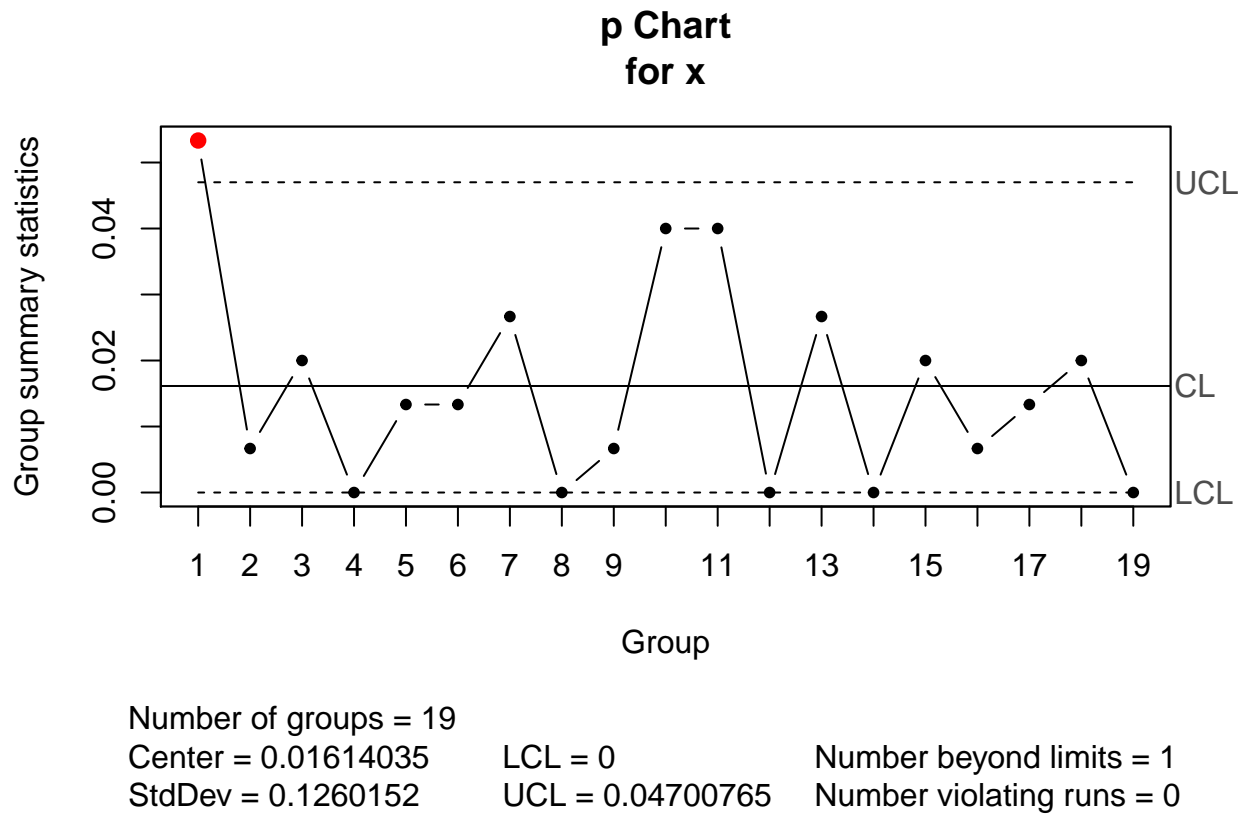

UCL = 0.05889761

Number beyond limits = 2

Number violating runs = 0

It appears the process is not operating in control. In our samples, there are two samples that are out of control, beyond the UCL, as can be seen from the control chart.

Removing the points that are OOC we get

and our new recommended UCL and LCL are displayed on the chart.

7.6

Number of groups = 10

Center = 4

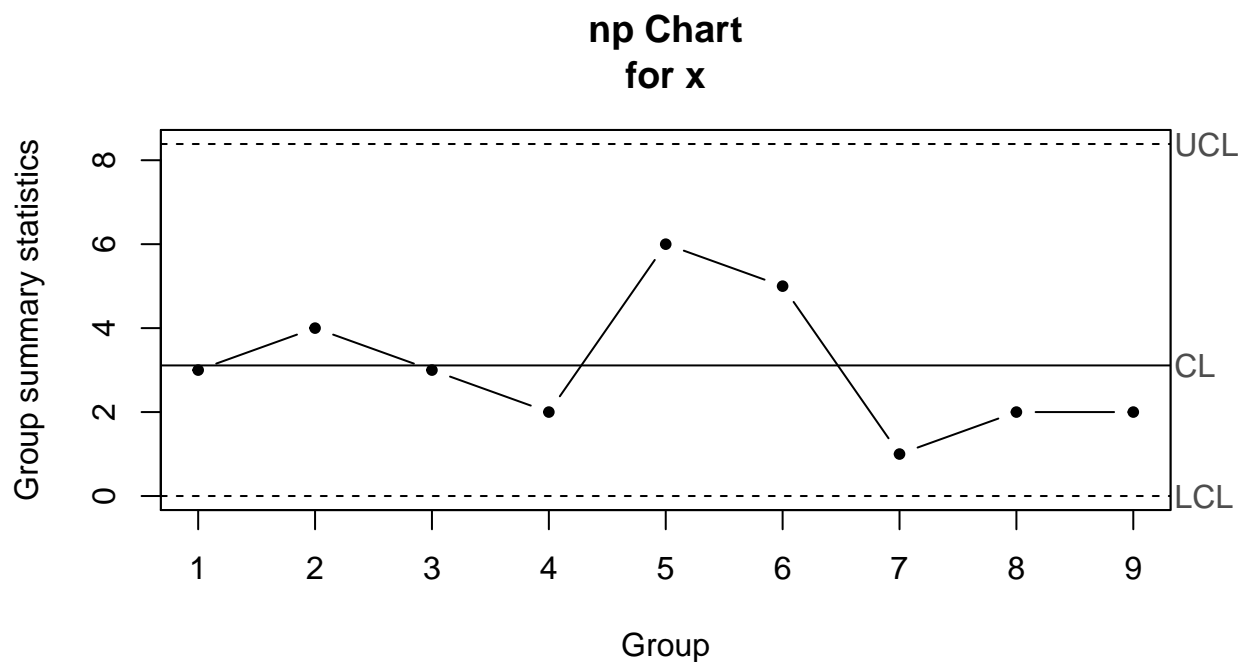

StdDev = 1.991984

LCL = 0

UCL = 9.975952

Number beyond limits = 1

Number violating runs = 0

Number of groups = 9

Center = 3.111111

StdDev = 1.758338

LCL = 0

UCL = 8.386126

Number beyond limits = 0

Number violating runs = 0

I would recommend that the  $UCL = 8.3861256$  and  $LCL = 0$ . Center line would be  $3.1111111$ . These limits are calculated after having removed the OOC point and then recalculating the statistics.

7.36

Number of groups = 25

Center = 2.36

StdDev = 1.536229

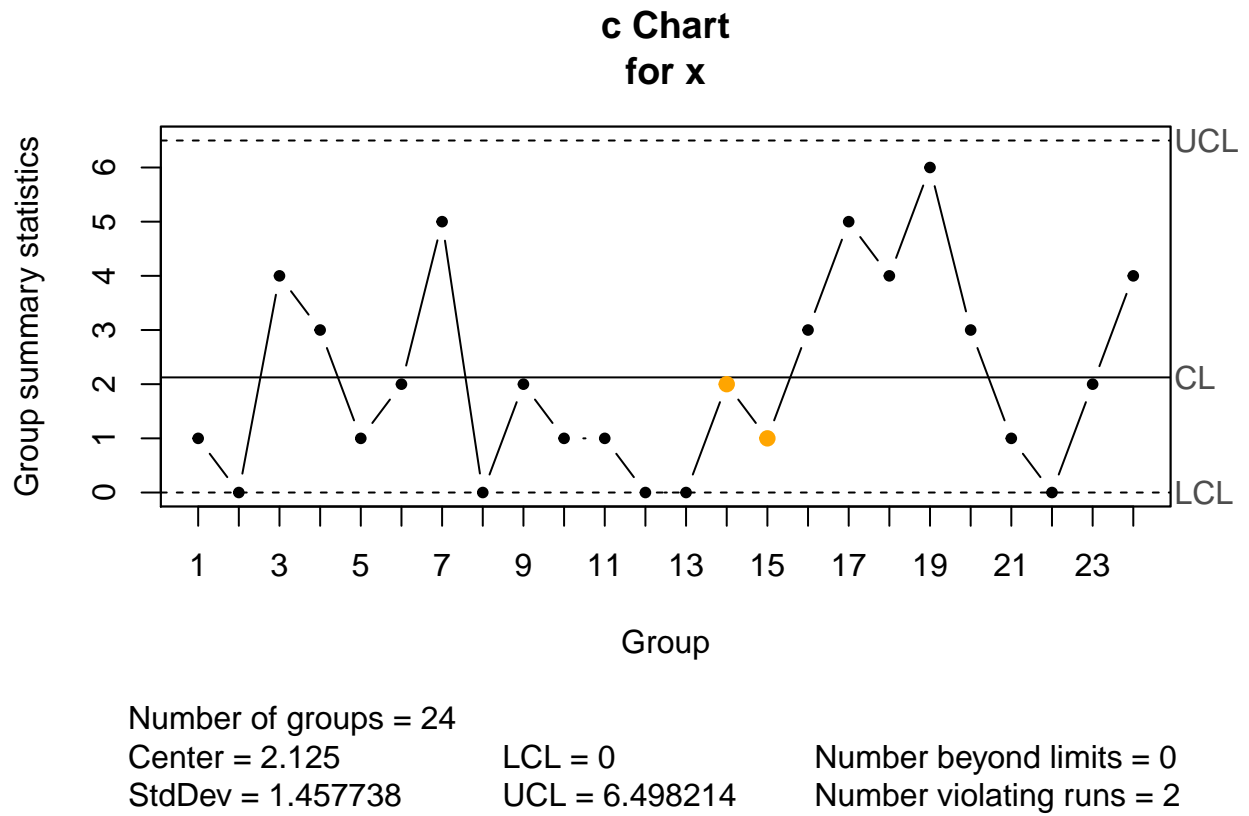

LCL = 0

UCL = 6.968687

Number beyond limits = 1

Number violating runs = 0

No. The process is not in control. There is one point that is beyond the upper control limit. We can recompute the limits after removing the point that is OOC and report these new limits as the recommended ones.

Looking at this chart, the two yellow points are warnings per the Shewhart Rules, i.e. a run of 7 points below or above the center line. Investigation may be warranted.

7.41

Number of groups = 22

Center = 8.590909

StdDev = 2.931025

LCL = 0

UCL = 17.38398

Number beyond limits = 3

Number violating runs = 0

The process has 3 ooc points one of which is the most recent sample. The process is NOT in statistical control.
